2) Short Description

118 teeth KP roller + bearing kit for John Deere® Wide Body

Replaces OEM#: AZ102602, AZ100856, AZ100857

Kernel Processors or Corn Cracker modules consist of two mill rolls with teeth pressed together by powerful springs, and are frequently used when harvesting cereal crops like corn and sorghum to crack the kernels of these plant heads. Kernel processors or Corn Crackers are installed between the cutterhead and accelerator. In most forage harvesters, the Kernel Processors or Corn Cracker can be quickly removed and replaced with a grass chute for chopping non-cereal crops. The length of the chopped forage is important, and corn kernels and stalk sections need to be cracked open otherwise they pass through the animal undigested.

Compatible models:

John Deere® 7000 Series:

John Deere® 7700, John Deere® 7800.

John Deere® 7050 Series:

John Deere® 7750, John Deere® 7850, John Deere® 7950.
